SUMMARY

I'm a second-year B.Tech student who builds things — full-stack web apps, AI-powered tools, whatever the problem needs. I've worked inside a startup, shipped real projects using Python, Flask, and JavaScript, and learned that the best solutions come from people who can both write the code and communicate the idea. I pick up new tech fast, I work well with people, and I genuinely enjoy the process of turning an idea into something real.

SKILLS

- **Programming Languages** — Python and Flask
- **Web Technologies** — HTML, CSS, JavaScript
- **Version Control** — Git, GitHub
- **Deployment tools** — Vercel, Netlify, Render, Firebase Hosting
- **AI Tools & Prompting** — Claude, ChatGPT, Gemini, Perplexity — daily usage for productivity, debugging, and research. Strong prompting skills to get the best out of AI tools.
- **Developer Tools** — VS Code, PyCharm

ACHIEVEMENTS AND CERTIFICATIONS

Best Student Award 🏆, Saveetha University

- Recognized for outstanding academic performance and active participation in student initiatives.

100 Days of Python Bootcamp 🏆, Udemy

- Completed an intensive Python programming program covering automation, APIs, Flask web development, and realworld project building.

Startup India Certified Business Developer 🏆, Winzera

- Certified for hands-on business development work at a startup — contributed to growth strategy, product promotion, and customer engagement.

AI Tools Masterclass 🏆, Freedom with AI

- Completed a structured masterclass on leveraging modern AI tools effectively — covering practical workflows, productivity use cases and advanced prompting techniques.

PROJECTS

Studysync 🏆, AI Powered Study & Productivity Tracker

- Developed a full-stack study tracking and productivity web application.
- Used Flask for backend routing and API handling.
- Integrated Firebase Authentication for secure user login/signup.
- Used Firestore Database for real-time data storage and synchronization.
- Designed to help students improve consistency, organization, and study efficiency.

MindMate — AI Emotional Support Chat Application 🏆, (Python, Flask, Firebase, OpenRouter API)

- Built an AI-powered chatbot web app that provides emotional support and meaningful conversation to users
- Integrated OpenRouter API to connect with AI language models, enabling intelligent and context-aware responses
- Used Firebase for real-time data storage and user authentication, supporting multiple independent user sessions
- Designed a clean, responsive frontend using HTML, CSS, and JavaScript for a smooth and calming user experience

Multi-Tenant Landing Page Generator 🏆, (Flask, HTML, CSS, JavaScript, Firebase)

- Built a full-stack web application that allows multiple users to create and manage their own landing pages within a single shared platform
- Implemented user authentication and secure data storage using Firebase, ensuring each user's pages and data remain completely isolated
- Designed an intuitive, easy-to-use interface so non-technical users can build and manage their pages without any coding knowledge
- Deployed the application live — fully functional and accessible on the web
